Art Unit: 1652

Applicants argue that the previous rejection should not have been made final. After a review of the action and the previous actions, the examiner agrees and therefore the finality of the previous action is dropped. This action is now made final instead of being after final.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 16 and 20-30 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. This rejection is repeated for the reasons given in the last action. Applicants arguments have been carefully considered but do not overcome the instant rejection.

Applicants argue that in Table 1 rVPx1, rVPx2 and rVPx3 are residues 1-676, 137-676 and 313-676, respectively and that each of these segments comprise residues 441-676 of SEQ ID NO:2. They further argue that page 19-21 "provides detailed description of the experimental procedure...[and] clearly indicate that all three recombinant polypeptides... possess vanadium peroxidase activity". The examiner does not agree. To start with, just because residues 441-676 are comprised within larger sequences does not indicate that these residues alone are active. Table 1 indicates that the three polypeptides are base pairs 1-2028, 409-2028 and 937-2028 of SEQ ID NO:1, respectively, which corresponds to amino acids 1-600, 60-600 and 236-600, respectively. (Actually base pair 2028 of SEQ ID NO:1 is one residue past amino

Art Unit: 1652

acid 600, base pair 409 is 2 residues past amino acid 60 and base pair 937 is 2 residues past amino acid 236, but a portion of a codon cannot encode an amino acid.) Apparently Table 1 is incorrect in somehow not taking into account the 227 base pairs before the first codon, but the table clearly states that the base pairs of SEQ ID NO:1 are being referred to.

The argument that *Fucus garneri* and *Fucus distichus* are the same is agreed with after reviewing the reference sent.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
